

## METHOD FOR COMMUNICATING OCCURRENCE OF EVENTS IN A STORAGE MEDIUM

Abstract

5 Briefly, in accordance with one embodiment of the invention, a computing system includes an event programming interface and a management application. The management application is communicatively coupled to the event programming interface so that the management application may register an event that the event programming interface will notify the management application once that event has occurred. In one  
10 embodiment, the event programming interface may notify the management application of the occurrence of an event that is associated with a storage medium in a RAID process.
